- 06DBT20780

## PREREQUISITES

- Basic database knowledge
- OnDemand CA Report Facility:  
Creating Queries 200  
15 Minutes  
06DBT20770

## WHO SHOULD ATTEND

- Financial Administrator
- System Administrator
- Application Administrator
- IT Manager
- Business Analyst

## Course Overview

If your organization stores decision support data in DB2 for z/OS databases, your end users need an easy way to access that data both online and in batch. CA Report Facility provides an intuitive, easy-to-use interface for building reports and queries, giving online data access to end users without forfeiting any measure of control.

This course will show learners how to take their existing queries and display them in three format/views. Learners will then be able to format they raw query data in the optimum format for the intended audience.

Learners will be engaged via conceptual content as well as hands-on interactive demonstrations.

## This Course Will Show You How To:

- Identify the three types of forms that are available using data that is obtained from DB2 by a query
- Create the various types of forms, meeting the needs of the intended audience, from the same query
- Run the various types of forms
