- 06DBT20790

PREREQUISITES

- Basic database knowledge
- OnDemand CA Report Facility:
Creating Queries 200
15 Minutes
06DBT20770
- OnDemand CA Report Facility:
Creating Forms 200
15 Minutes
06DBT20780

WHO SHOULD ATTEND

- Financial Administrator
- System Administrator
- Application Administrator
- IT Manager
- Business Analyst

Course Overview

If your organization stores decision support data in DB2 for z/OS databases, your end users need an easy way to access that data both online and in batch. CA Report Facility provides an intuitive, easy-to-use interface for building reports and queries, giving online data access to end users without forfeiting any measure of control.

This course will show learners how to take their existing queries and forms and automate the reporting function. Learners will then be able to execute a procedure that will run saved queries and the corresponding saved forms, either on demand or via a batch run.

Learners will be engaged via conceptual content as well as hands-on interactive demonstrations.

This Course Will Show You How To:

- Explain the purpose of procedures and how it will automate common reporting needs
- Identify typical use cases for procedure use
- Build a procedure to later run on demand or via a batch
