Course Overview

CA Datacom is a reliable database repository with enterprise-wide high-volume workload and fault-tolerant capabilities. CA Datacom and its family of rDBMS products provide you with that repository.

CA Datacom provides transaction processing performance for existing and new workloads, helping you consolidate business functions on a central data repository, as needed. When combined with related solutions, CA Datacom delivers cost-effective and reliable database processing.

This course describes each of the various CXX reports and highlights DBUTLTY keyword parameter values contained in the various reports.

This Course Will Show You How To:

- Identify the DBUTLTY Directory (CXX) report types
- Describe the information contained in each of the CXX report types
- Describe the primary purpose of each CXX report type
- Describe the layout of the information in each CXX report type
- Describe the content contained in each CXX report type
- Identify the DBUTLTY keyword parameter values that are contained in the CXX report types
