

CA Deliver™ Using Distribution Tables to Enhance Dynamic Report Distribution 200

EDUCATION COURSE DESCRIPTION

SUPPORTED PRODUCT RELEASES

CA Deliver 14.0

COURSE TYPE, LENGTH, & CODE

- Web-Based Training (WBT)
- 30 minutes
- 06DLV20010

PREREQUISITES

- Familiarity with CA Deliver report and distribution definitions

WHO SHOULD ATTEND

- CA Deliver Administrators

Course Overview

This course is designed to help CA Deliver administrators learn how to use distribution tables to manage dynamic report definitions.

Using distribution tables to determine where pages are distributed and which pages to distribute simplifies the management of distribution IDs and variables and dramatically decreases the size of the dynamic report definition.

Distribution tables also make it possible to manage unique page distribution to multiple distribution IDs, without maintaining multiple distribution lists.

This Course Will Show You How To:

- Explain how to use distribution tables to determine **where** a report is distributed.
- Explain how to use distribution tables to determine **which** report pages to distribute.
