- System Administrators
- System Programmers
- Operators
- IT Managers

Course Overview

CA OPS/MVS Automation Point is a Windows-based event monitoring, system automation and staff notification component of the CA OPS/MVS® solution. It monitors mainframe systems, distributed systems and devices throughout your enterprise, enabling event correlation among the many varied systems within your corporate computing environment. Additionally, rules and scripting capabilities enable you to consolidate events and automate the systems from consolidated source. An Alert Management interface manages critical events that require human decision-making and intervention and escalate them with a policy-based notification.

This micro-learning course is designed to provide an overview of the key features, components, and architecture of CA OPS/MVS Automation Point.

This Course Will Show You How To:

- Take the simple recommended actions that help ensure a good product experience.
- Explain the key product features and components.
- Explain the product architecture.
