CA Mainframe Security Insights Platform: Identify Who Has Access to Your APF Libraries 200

EDUCATION COURSE DESCRIPTION

RELEASE(S)
CA Mainframe Security Insights Platform
Version 1.0

COURSE TYPE, LENGTH, & CODE
- Web-based Training (WBT)
- 15 Minutes
- 06SIP20100

Course Overview

CA Mainframe Security Insights Platform (Security Insights) aggregates data from your mainframe environment and its security products into reports that offer insights into your mainframe security posture. These reports help you identify and reduce risk to your mainframe.

APF libraries are authorized to perform critical updates and access restricted areas. Misuse of these libraries enables users to perform activities for which they would not normally be authorized. Therefore, unsecured APF-authorized libraries offer an unprotected entry point to your mainframe. Knowing who can access the APF-authorized libraries lets you begin limiting and securing access to them, which helps you adhere to the principle of least privilege and reduces risk to your mainframe data.

This course will teach you how to use the Security Insights use case: "Identify who has access to your APF libraries" to create a report and view the results.

This Course Will Show You How To:

- Describe the Security Insights use case

- List the use case prerequisites

- Create and analyze the use case report

- Describe report messages
